

Technical Notice

TD 9760/2019

Dated: 31.01.2019

SUBJECT:

PSC Concentrated Survey Campaign - 2019

INSB Class in the frames of its efforts to support shipowners and managers to avoid business disruption and additional costs incurred by PSC detentions is introducing one more activity/initiation in this respect.

During the 2019 year, whenever surveyors attend onboard an INSB classed and statutory certified ship, shall closely examine certain common PSC deficiencies and they shall confirm that they are in a satisfactory and effective condition.

During 2019 the following frequently listed PSC deficiencies shall be verified during this concentrated survey campaign:

1. Life Saving Appliances

- Lifeboat Engine
- Launching arrangement of lifeboat, rescue boat and liferaft

2. Fire-Fighting Appliances

- Main fire pumps
- Emergency fire pump
- Fire main piping
- Fire detection and alarm system

3. Load Line Items

- Ventilators
- Air pipes

4. Safety of Navigation

- Echo sounder
- VDR/S-VDR (Voyage Data Recorder)
- Charts & Nautical Publications

Ensuring these items are suitably maintained, and remain in a fit and effective condition, reduces the potential for a ship being detained by the Port State Control authorities.
